### Memorandum

To: Columbia River Basin Ecological Services and Fishery Resource  
Office Project Leaders

From: Special Assistant to the Regional Director for Columbia River Basin Issues

Subject: Subbasin Assignments for the Columbia River Basin

Attached is a list of the Columbia River subbasins and provinces outlined by the Northwest Power Planning Council in their Columbia River Basin Fish and Wildlife Program for 2000, and the U.S. Fish and Wildlife Service Field Offices that correspond to each subbasin. The purpose of this list is to ensure each of the 62 subbasins are assigned to a specific Field Office in the appropriate geographic area. This will ensure the Regional Director recognizes which Field Office has the lead in each subbasin and who will assist our partners in developing subbasin plans.

When we decide to participate in developing a specific subbasin plan, the designated Field Office will have the primary responsibility for our agency. This does not mean we will get involved in all 62 subbasins. The decision to participate in subbasin planning at the Field Office level is your decision as the project leader. However, we expect Field Office involvement in those subbasins where we have important programs or can bring important information and expertise to the planning process. You have the option of assigning the lead responsibility to any of your geographic sub-offices who may be in a better position to participate in subbasin planning. In addition, the lead office would need to coordinate with our other offices in the area, including National Wildlife Refuges and National Fish Hatcheries.

We will likely participate in the development of numerous subbasin plans, but we do not contemplate our Field Offices contracting with the Bonneville Power Administration to be the lead entity for developing these plans. Local watershed councils, conservation districts, environmental consulting firms, Tribes, and other local interests are in a better position to be the lead contracting entity.

Because some subbasins cross State boundaries, there may be more than one Field Office that could get involved in subbasin planning (e.g., Walla Walla). For these subbasins, the appropriate project leaders will decide if they want to get involved in subbasin planning and which Field Office has the lead.

We anticipate providing funds to Region 6 for their participation in subbasin planning through the Montana Field Office in Helena. Therefore, the Montana Field Office has the lead for Columbia River subbasin planning in Region 6, including the entire Mountain Columbia Province in northwest Montana (five subbasins) and the Snake Headwater subbasin in western Wyoming.

Please review the list to ensure the subbasin/Field Office designations correspond to the geographic boundaries of your Field Office. Please call Mark Bagdovitz at (503) 872-2763 if you have any changes or corrections.
